## **Mesa Corporation Launches NetScan Module**

*Unique technology to increase user efficiency and convenience*

**Lincoln, Neb. – May 12, 2006** — Mesa Corporation, an industry leader in document and information management, today announced the launch of NetScan™, an add-on module for Scanning Workstations. The new offering provides users with increased flexibility while scanning and identifying documents by allowing scanning and identification to occur on separate workstations. A standard Scanning Workstation requires the user to scan and identify documents at a single workstation.

“We are extremely pleased to offer NetScan™ to new and existing clients,” said Tom Manning, President and CEO of Mesa Corporation. “It ultimately creates a more efficient and secure imaging workstation adaptable to almost any environment.”

NetScan™ has the ability to be configured and used many different ways depending on each client’s unique needs. Scanning can take place at one or several locations, after which the images are sent to another PC for later identification before being permanently stored in Archive Plus™. Or, if several users need to access images after they are scanned, those images may be stored in a ‘holding folder’ at a networked location for easy access by approved users.

## **About Mesa Corporation**

Established in 1990, Mesa Corporation provides cost-effective document management systems for companies needing to manage data, including text, images, audio, video and databases. Mesa's systems are modular in design and incorporate the latest mass storage technologies to provide solutions from single departments to enterprise wide applications. Mesa provides solutions to clients in various industries including medical, government, media, insurance, retail and manufacturing.
