Mesa Corporation Launches Three New Barcode Recognition Features

*Automatic Orientation, Automatic Scheme, and Barcode in Range
features significantly increase
Barcode module capabilities.*

Lincoln, Neb. – August 11, 2006 — Mesa Corporation, an industry leader in document and information management, today launched significant enhancements to their Scanning Workstation module. The new software includes ‘Automatic Orientation,’ ‘Automatic Scheme,’ and ‘Barcode in Range.’ This technology eliminates having to ensure all barcodes in a batch of documents are oriented similarly on each page, as well as allowing mixed barcode symbologies within a batch of documents. Additionally, users whose documents have more than one barcode per page, have the ability to choose which barcode or barcodes to read.

“The implementation of these barcode features greatly enhances the capability of the standard Scanning Workstation,” said Tom Manning, President and CEO of Mesa Corporation. “Now, whether a company uses multiple barcodes per page or even varied schemes per page, Scanning Workstation will recognize all barcodes designated for identification by the user.”

With Automatic Orientation, barcodes do not have to be placed in a uniform direction or within the same area on each page. Consequently, when a user preps a document for the scanning process, they may place the barcode or barcodes anywhere on the document - horizontally or vertically and know it will be scanned successfully.

The Automatic Scheme feature works in conjunction with Automatic Orientation to further simplify the scanning process by allowing a user to scan a batch of documents containing different barcode schemes. Separating batches based on barcode scheme is not necessary, therefore reducing preparation time dramatically.

The third new feature, Barcode in Range is ideal for scanning documents that have multiple barcodes per page. Users are able to specify which barcode or barcodes to use for the identification process.

About Mesa Corporation

Established in 1990, Mesa Corporation provides cost-effective document management systems for companies needing to manage data, including text, images, audio, video and databases. Its systems are modular in design and incorporate the latest mass storage technologies to provide solutions for single departments to enterprise wide applications. Mesa's clients include medical, government, media, insurance, retail and manufacturing.
