**Mesa Corporation announces the release of Version 8!**

*Archive Plus Version 8 has new features that benefit all users,  
as well as exciting new modules.*

- Fully compatible with Windows 7 and 2008 Server operating systems, and backwards compatible with XP.
- Once Version 8 is installed, future auto-updates on Client and Scanning Workstations no longer require an Administrator Login.
- Mesa Email Routing is a new module that converts documents to searchable PDFs and emails them via Microsoft Outlook.
- The PDF document module has been enhanced by converting incoming print streams to searchable PDFs.
- Express Search replaces Saved Searches on a standard Archive Plus system. Additional functionality can be purchased to "scrape" search criteria from a third-party program.
- Scanning clients that utilize the Key List for identification will enjoy a streamlined process for locating and selecting key values from the list.
- New & improved Virtual Volume naming convention - filenames now include the Library and Volume number to make identification and backup a breeze.

Archive Plus Version 8 is being distributed as a controlled release upgrade, since assistance from Mesa Customer Support is required for the upgrade.
